

Los Angeles Powder Coating

Specialized Coatings modern powder coating technologies help add specialized finishes in a variety of colors to household items, automobile, motorcycle and bicycle parts. We are EPA and AQMD licensed.

Powder coating

Powder coating is a modern and popular dry finishing process. Powder coating is used on a wide range of products and represents over 15% of the total industrial finishing market. More and more manufacturers are beginning to use powder coatings because of their high-quality, durable finish. This allows for maximized production and a simpler environmental compliance. Powder coatings are available in a unlimited range of colors and textures. State-of-the-art technology has resulted in excellent performance properties.

Based on a polymer resin system, powder coatings are combined with curatives, pigments, and other additives. These pigments are ground into a consistency similar to flour.

Application uses a process called electrostatic spray deposition that uses a spray gun to deposit the powder. After, the part is entered into a curing oven where the heat is applied to create long molecular chains of paint.

Because there are no harsh chemicals or solvents to evaporate, powder coating has been an industry leader in green technology. Powder coatings are used in thousands of applications a year and are commonly mistaken for liquid paint. Because of the long lasting benefits and environmental value, manufacturers have been using powder coating for their products for years.

Ceramic coating - Whether you want ceramic coating for the look, durability, or performance enhancements, Specialized Coatings has been in business since 1996 and provides exceptional service on our metal coatings.

Not only do thermal ceramic coatings provide a long-lasting finish, they are also heat resistant and can help your car, truck or motorcycle run smoother. Our showroom provides excellent turnaround times for all ceramic coating services to help you get back on the road quicker.

We specialize in making metal beautiful. Our professional equipment and state-of-the-art technology always leaves a professional showroom finish for your car, truck, or motorcycle.
